PROFESSIONAL SUMMARY

Data Analyst with experience in data evaluation, business operations, and end-to-end analytical projects. Skilled in SQL, Python, Excel, and data visualization, with hands-on experience in data cleaning, transformation, business analysis, and recurring report workflow.

PROFESSIONAL EXPERIENCE

Data Annotator (Data Evaluation Specialist) **Oct 2024 - Sep 2026**

Hugo Technologies, Lagos

- Reviewed datasets against established guidelines to ensure data integrity and uphold quality standards.
- Maintained 98% accuracy and consistency in data annotation to meet strict quality requirements.
- Evaluated complex and ambiguous data samples using critical thinking to support reliable dataset labeling.
- Processed text and image datasets by identifying contextual patterns to preserve information accuracy.
- Collaborated with remote teams to resolve data discrepancies and clarify annotation requirements.
- Supported AI model training by providing high-quality, reliable labeled datasets.

Business Manager **Apr 2022 - Oct 2024**

Felix Farms

- Tracked performance metrics and maintained operational records to identify trends and monitor performance.
- Monitored inventory, purchasing, and expense records to identify cost trends and evaluate spending patterns.
- Supported cost-effective procurement decisions.
- Developed and maintained spreadsheets to analyse sales performance across distribution channels.
- Identified demand patterns to support inventory planning and sales forecasting.
- Analyzed sales trends, pricing data, and resource requirements to identify growth opportunities and improve operational efficiency.

PROJECTS

Sales Management Workflow Creation and Performance Analysis

- Designed and implemented an end-to-end sales data analytic workflow, transforming raw transaction records into a structured datasets suitable for recurring analysis and management reporting.
- Developed a data transformation process to convert wide-format sales records into a normalized, analysis-ready structure, linking sales representatives, distributors, products, quantities, tiers, dates, payments, and pricing information.
- Designed the workflow to support future sales records and recurring updates, reducing the need to rebuild the analysis as new transactions are added.
- Used the prepared datasets to perform sales performance analysis across representatives, distributors, products, and time periods, ultimately feeding the results into a management reporting dashboard.

Exploratory Data Analysis

- Cleaned and prepared a raw retail sales datasets using Python (Pandas and NumPy), handling missing values, inconsistent entries, data types, and duplicate records.
- Used relationships between products, categories, prices, quantities, customers, and total sales to identify and fill missing values instead of applying blanket assumptions.
- Built a reliable analysis-ready datasets and checked the results to ensure the cleaning process did not introduce inconsistencies or distort the underlying data.
- Analyzed sales trends, seasonality, product and category performance, and customer purchasing patterns using Python, Matplotlib, and Seaborn.
- Compared yearly and monthly performance to identify changes in revenue, order volume, product demand, and customer activity, and translated the findings into practical business observations.

Sales Team Leaderboard & Data Analytics Pipeline

- Built a comprehensive 7-phase data pipeline in MySQL to intake raw, chaotic retail logs from our Lagos and Abuja hubs, while ensuring data integrity.
- Deep-cleaned the dataset by fixing regional text errors, standardizing categories, converting text strings into readable math formats, and scrubbing redundant duplicates so the database could run smoothly.
- Salvaged incomplete records by writing a custom query that reverse-engineered missing product quantities based on sales and

discount data, preserving the integrity of the data model.

- Uncovered a crucial business insight: while our top sellers were hitting great numbers ($5.29M each), customer ratings were low across the board. Realized this wasn't a staff issue, but an organizational bottleneck like stock shortages or delivery delays.

EDUCATION

Bachelor of Science in Environmental Biology **Jun 2014 - Jun 2021**

Ladoke Akintola University of Technology

CERTIFICATIONS

- Data Analysis Using Python - IBM

KEY SKILLS

- Data Analysis & Interpretation
- Data Cleaning & Preparation
- Microsoft Excel (Pivot tables, Vlookup, Charts)
- SQL
- Python for Data Querying
- Power BI
- Tableau
- Statistical Analysis
- Feedback & Survey Data Analysis

STRENGTHS

- Attention to details
- Good communication skills
- Analytical Thinking

LANGUAGES

- English - Fluent / Native
